opal[®]etch

35% Phosphoric Acid

Achieve the ideal bonding surface for complete resin penetration.

Opal Etch is a 35% phosphoric acid etchant with the **optimal viscosity** to penetrate the smallest fissures without migrating. Bonding reliability begins with Opal Etch.

- Brilliant blue color ensures safe, accurate placement and complete removal.
- Proprietary formulation contains a surfactant for complete, easy rinsing.
- Provides a well-demarcated chalky appearance.
- Syringe and tip offer controlled delivery, protecting soft tissues.

Opal Etch

Part #	Product Description
500-012	Opal Etch Kit 4 - 1.5gm Opal Etch syringes + 20 Opal Blue tips
